

bbs_announce

Submits a text file to a array of message bases.

Install Steps:

- i. Edit Announce.txt for your desired website to promote. Unless you want to promote mine instead 😊
- ii. Copy the Announce.txt & bbs_announce.pl files to /sbbs/exec. You can put it anywhere but you must edit the bbs_announce.pl script to tell it where to look for Announce.txt.
- iii. Edit the /sbbs/exec/bbs_announce.pl script for your settings and what message bases you want to post in.
- iv. Do a test run by running bbs_announce.pl
- v. If all looks good set up a cron job to run no more often than once per day - please no spam!
Here is a example cronjob entry:

```
01 01 * * * /sbbs/exec/bbs_announce.pl
```

Getting Message Group IDs:

- i. Run scfg
- ii. Go to "Message Areas"
- iii. Choose your message group
- iv. Select a entry
- v. Go to "Message Sub-boards"
- vi. Choose your board and press [ENTER]
- vii. Note the entry for "Internal Code" - this is what you need to put in bbs_announce.pl
- viii. Repeat for any other boards you want to post to.
- ix. Exit scfg
- x. All done!
